

PERSONNEL REPLICATION FROM C·CURE 800 TO C·CURE 9000

The NMS Personnel Replication utility allows customers to replicate data between a C·CURE 800 and C·CURE 9000 during a system migration with complete confidence in data integrity.

- Migrate with complete confidence
- Works in a MAS/SAS environment
- Replicate personnel data on a continuous basis
- Allows a phased approach
- Reduces data entry time and errors, and labor costs
- Migrate from C·CURE 800 or C·CURE Central

An Essential Step in System Migrations

NMS Personnel Replication is used by customers looking to migrate from one system to another while maintaining critical personnel data and ensuring business continuity.

Migrating an entire system complete with readers, controllers, inputs/outputs, etc. requires time and planning. The replication utility enables customers to implement a phased migration approach while ensuring data is being accurately replicated between servers, giving employees uninterrupted access to authorized areas.

Personnel replication provides synchronization and high availability, ensuring you always have up-to-date information even during a complex, multi-site system migration.

Versatile and Reliable Replication

NMS Personnel Replication is incredibly versatile, assisting customers who are migrating to C·CURE 9000 from C·CURE 800/8000 or even from C·CURE Central.

The utility looks beyond basic cardholder information - bringing clearances, credentials, portraits, and signatures as desired.

Replicate the data bi-directionally if you want personnel to replicate back and forth between C·CURE 800 and C·CURE 9000, or unilaterally if your migration plans are more imminent.

Personnel Replication is powerful enough to handle the complex needs of a MAS/SAS environment and provides security personnel complete confidence in their data.

**FOR CUSTOMERS WHO
REQUIRE UNCOMPROMISED
DATA INTEGRITY**
