

FUJITEC ELEVATORS INTEGRATION WITH C·CURE 9000

The integration between C·CURE 9000 and Fujitec elevators provides secure and efficient destination dispatch and allows security to manage elevator access through a single user interface.

- Seamlessly integrates Fujitec elevators with C·CURE 9000
- Grants passenger access only to authorized floors
- Helps improve elevator traffic distribution during peak times
- Manage all elevator access from the C·CURE 9000 admin

Single card solution for building and elevator access

The C·CURE 9000 integration with Fujitec elevators allows security operators to more securely and efficiently manage elevator access.

Elevator passengers present their access card to a reader. Based on C·CURE service patterns (which are new objects that can be thought of as similar to clearances), the elevator display will indicate which floors that cardholder can access.

Secure and efficient destination dispatch

The integrated C·CURE/ Fujitec Solution is an efficient way to extend a comprehensive security solution throughout a building.

In high-traffic applications such as multi-tenant buildings, the integration works seamlessly with turnstiles to provide the identification functionality needed to ensure passengers access only authorized elevators and floors.

**IDEAL FOR HIGH-RISE
APPLICATIONS WITH
EXCESSIVE TRAFFIC
AND HIGH OCCUPANCY**
