

HOUSING/MEETING BOOKING SOFTWARE STARREZ INTEGRATION WITH C·CURE 9000

For many universities, integrating Student Housing/Meeting Booking software with an access control system is a necessity to streamline the provisioning of access control cards.

- Real-time updates between StarRez and C·CURE 9000
- Compatible with C·CURE 9000 v2.4 and higher
- Easily handles lost/stolen cards or room changes
- Reduces duplicate, error-prone data entry

Fast, Error-Free Provisioning Process

StarRez is a comprehensive student housing solution that many universities use for online housing applications, room booking, and other administrative functions.

To streamline the provisioning of cards and ensure the security of students, staff, and visitors, NMS developed an integration between StarRez and C·CURE 9000. This integration significantly reduces redundant data entry which can lead to errors and delays in providing approved access.

Real-Time Updates for a Secure Campus

When a student or faculty member requests a room booking, authorized personnel simply enter their contact information and select the desired room(s) and dates in the StarRez system. They associate a 'card' and unique Enterprise ID, and C·CURE provisions the correct clearances. C·CURE verifies that the transaction has been successfully completed and the requestor is issued an access card that grants them entry to the approved areas at the approved times.

The integrated solution also supports:

- De-provisioning lost/stolen cards
- Changing meeting rooms and times
