

## PROXSAFE KEY MANAGEMENT SOLUTION INTEGRATION WITH C-CURE 9000

The integration between C-CURE 9000 access control and proxSafe Key Management solutions allows users to manage access to physical keys from a single user interface.

- Manage physical key access to rooms, radios, weapons, vehicles, and other assets
- All events managed in C-CURE user interface
- Minimize the number of misplaced or lost keys and assets
- Reduces cost of deploying electronic access control on every door
- All activity logged in C-CURE journal

### Maintain Key Visibility in One Interface

The demand for physical key solutions continues to grow as customers look for cost-effective ways to manage security across large facilities or campus environments...especially those with temporary or part-time workers such as electricians or housekeeping crews.

proxSafe Key Management Solutions provide incredibly effective security, especially when tightly integrated with the C-CURE 9000 access control system. The integration developed by New Market Solutions allows security operators to assign access to assets such as weapons cabinets, vehicle keys, or specific rooms, based on C-CURE clearance assignments. The operators can then closely monitor the whereabouts of those keys or assets through C-CURE.

### Comprehensive Journal Reporting

All proxSafe events are reported in the C-CURE journal like any other hardware, giving operators a one-stop place to review important information related to lost or missing keys, in order to quickly mitigate any security concerns.

The integrated C-CURE/ proxSafe Solution is an excellent way to strategically implement the most cost-effective security solution across an enterprise or small business.
